

Van Fleet operators who can demonstrate that they prioritise sustainable operations through fuel management programmes and implementation of Eco Driver training, can now attain the VanSafe 'Green Standard'.

VanSafe is an industry driven programme designed to raise operational standards and recognise excellence and promote compliance and best practice in the operation of van fleets.

This standard ensures that van fleet operators have the systems in place to ensure safe, legal and sustainable operations; and with the addition of the VanSafe Green Standard it now enables independent verification for those companies who wish to show; they have systems in place aimed at reducing the impact on the environment of their operations, and that they are committed to further reducing their impact on the environment through carbon reduction policies and fuel saving measures.

Go 'Green' with our VanSafe Standard
